

Provides Isolation From Hazardous Or Corrosive Liquids

SIGMAMOTOR Pressure Gauge Isolators allow standard pressure gauges to be used in corrosive services.

The upper section (gauge side) is filled with glycerin, mineral oil, silicone or halocarbon. A diaphragm separates the glycerin from the lower section which connects to the pressure source.

A 1/2" port is provided for connection to the pressure source.

Features

- CNC precision machined parts
- Variety of materials available
- Various pressure ranges available
- Cost effective and reliable
- 2.5" Dial (4" dial optional)
- Pre-filled with glycerin between gauge and diaphragm

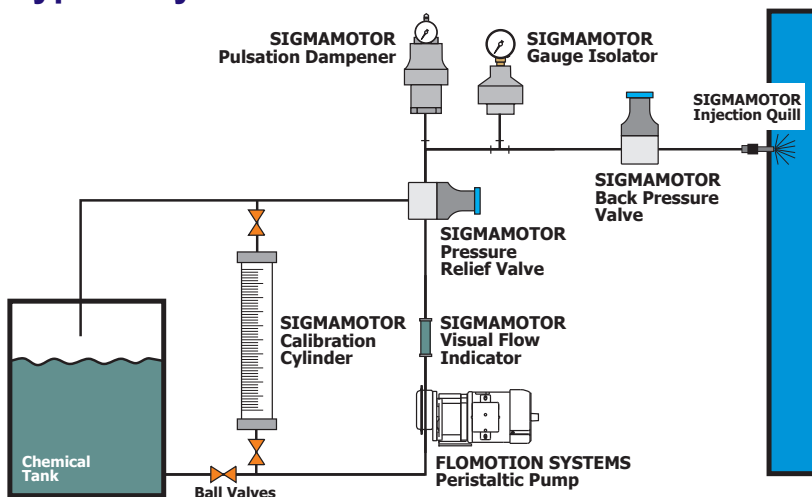

316 SS

POLYPROPYLENE

Typical System

SIGMAMOTOR PRESSURE GAUGE ISOLATOR
